

Postless Hip Pad

Reduced pain and faster recovery can potentially be reached with the post-less approach while increasing patient comfort.

The post-less hip pad assists with surgical efficiency and effectiveness, particularly in complex cases, by providing unobstructed access and improved visualization. This can lead to better patient outcomes and reduced complications.

Product information

- The disposable Hip Pad is a memory foam positioner that holds the patient securely onto the OR table during surgical procedures. (for example: traction during hip arthroscopy)
- Achieving distraction without the need for a perineal post
